MODULE-1				
Q.No.	**Question**	**Marks**	**Bloom's Taxonomy Level**	**CO**
1.	Explain the difference between population and ample with examples.			
OR				
2.	Describe the advantages and disadvantages **of** sampling **i**n research.			
3.	Explain the about Nominal, Ordinal, Interval, Ratio data with examples.			
OR				
4.	Explain the relationship between independent and dependent variables **w**ith examples.			
5.	What **is** data access in SPSS**?** Explain the process of scrolling through cases in SPSS			
OR				
6.	How can missing values be defined in SPSS**?** Explain the process of standardizing the chart axis using Pie chart.			
7.	What does minimum value represent in SPSS output? Describe the steps for identifying the system missing and user-defined missing values.			
OR				
8.	Describe about valid cases and missing cases in SPSS?			
MODULE 2				
9.	Differentiate between EDA and Confirmatory Data Analysis**.**			
OR				
10.	What is Exploratory Data Analysis (EDA) and why is it important before performing statistical modelling?			
11	Construct **a** frequency table and histogram for the			

	following dataset: 12, 15, 16, 18, 18, 20, 21, 22, 25, 26, 27, 30, 32, 35. Identify the class intervals and frequencies for the given data.			
OR				
12	What types of graphical tools are commonly used in EDA?			
13	Explain the use of error bars in mean plots**.**			
OR				
14	What is a Normal Probability Plot (Q-Q Plot)**?** What graphical methods can be used to display mean differences between groups**?**			
15	Explain the use of error bars in box plots**.**			
OR				
16	Explain the t-Test using any two examples			
MODULE 3				
17	What is Analysis of Variance (ANOVA)**?** Explain its purpose in statistical analysis			
OR				
18	What are the **assumptions of One-Factor ANOVA?**			
19	Explain the concept of **null hypothesis and alternative hypothesis** in ANOVA.			
OR				
20.	Explain the difference between **one-factor ANOVA and two-factor ANOVA**
