

ASSIGNMENT 2
ADVANCED BUSINESS ANALYTICS USING SPSS

1. Define Exploratory Data Analysis (EDA). What is interval scale data? Give two examples.
2. Explain the purpose of a frequency table.
3. A dataset of student test scores:

45, 50, 52, 60, 65, 70, 72, 75, 78, 80, 85, 90, 95, 100

Construct a frequency table using class intervals of width 10

Calculate mean, median, range, standard deviation and variance for the above data. Draw a histogram for the data.

4. Consider the following data set
12, 15, NA, 18, 20, NA, 25, 30

Identify the missing values in dataset. Replace the missing values with mean substitution. Compare the results with dataset given in question 3.

5. Consider the following pair of data sets
Two groups of students' scores:

Group A: 55, 60, 65, 70, 75

Group B: 50, 52, 58, 62, 68

Calculate the mean of each group. Discuss how sample size affects the results of each group. Display mean differences using graph.
